EDUCATION

Grambling State University - B.S. Computer Science - GPA: 3.7 Expected Dec. 2027

Honors/Awards: President list, Honors Scholar.

Relevant Coursework: Cyber Security, Intro to Microsoft Azure, Database management, Parallel processing, big data and Cloud security, Secure cloud architecture, Microsoft AI skills navigator, Claude Intro to agent skills, Data Structures & Algorithms, Operating Systems, Artificial Intelligence, Machine Learning, Computer Networks, System Design, Statistics.

WORK HISTORY

Security Engineering Intern | Reserve Bank of Zimbabwe (remote) May 2026–Aug 2026

● Re-architected the banking app's authentication and authorization flow, migrating 50,000+ customer accounts from password-based login to passkeys (FIDO2/WebAuthn) to eliminate phishing and credential-stuffing risk.
● Implemented electronic signatures for loan and transfer transactions, providing integrity and non-repudiation through digital signatures (ECDSA/RSA) and tamper-evident audit records.
● Secured data in transit and at rest by configuring TLS 1.2+, encrypting stored data with AES-256-GCM, and hashing credentials with per-user salts (Argon2id/bcrypt) per OWASP cryptographic best practices.

Backend Software Engineering Intern | ERISA Discovery Oct 2025- Nov 2025

● Designed the system architecture (data model, load estimates, failure modes, cloud infrastructure) for a real-time claims-auditing dashboard serving 20,000+ users, using Django, PostgreSQL, HTMX, and Alpine.js.
● Scaled the dashboard horizontally with stateless app instances behind a load balancer with health-check endpoints, cutting read latency with Redis caching and query optimization on Azure DB for PostgreSQL with replication for failover.
● Reduced bulk CSV processing time to under 30 seconds with batched bulk_create/bulk_update and async workers, secured with RBAC, HTTPS, CSRF protection, and env-var secrets, and shipped through CI/CD on Render.

PROJECTS

ClearVote | Carnegie Student Leadership Program June 2026-Present

● Co-developed an AI-powered agent that detects and flags potentially misleading information influencing voters, achieving 80%+ detection coverage in testing across 1,000+ sample claims.
● Built a verification pipeline that ingests information from trusted sources, compares against user-surfaced claims, and generates credibility assessments with links to verified sources.
● Led the LangGraph orchestration layer, designing agent nodes, tool calls, and verification workflows for context-aware reasoning across the backend and React frontend.
● Integrated GPT-5.6 Luna LLM capabilities and external APIs to coordinate information retrieval, claim comparison, analysis, and response generation.

Amazon Music Voice Agent (Amazon Nova Hackathon) March 2026-April 2026

● Built a voice-powered Amazon Music assistant Chrome extension letting users search songs and manage playlists through natural speech, using a React + TypeScript Shadow DOM overlay.
● Developed a real-time audio streaming pipeline using the Web Media Recorder API, Kafka, and WebSockets to transmit microphone audio to a FastAPI backend for low-latency voice interaction.
● Integrated Amazon Nova Sonic for speech understanding, Nova Lite for reasoning and command interpretation, and Nova Act for UI workflow automation to translate spoken requests into actions.

LEADERSHIP & PROFESSIONAL DEVELOPMENT

Eaton EmpowerU 2026 Jun 2026

● Selected for Eaton's emPOWERU Leadership Summit; collaborated with 50+ engineering peers on executive-led workshops focused on technical decision-making and team leadership.

Expedition EY – EY Global Learning Program March 2026 – Present

● Selected for EY's professional development program focused on business strategy, consulting frameworks, and career readiness through workshops and mentorship with EY professionals.

Spectrum Sizzle Advanced Undergraduate Workshop June 2026

● Selected to evaluate Qualcomm sidelink spectrum proposals and submitted engineering recommendations to the FCC.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML/CSS

Tech Stack: React, FastAPI, Flask, Django, Tailwind CSS, Kafka, Cassandra, DynamoDB, PostgreSQL, MySQL, Docker, Kubernetes, Redis, Amazon EC2, Azure, Git, GitHub, Linux, REST APIs, Web Sockets, Agile, System Design.
