EDUCATION

Grambling State University — B.S. Computer Science - GPA: 3.7 Expected Dec. 2027

Honors/Awards: President list, Honors Scholar.

Relevant Coursework: Intro to Microsoft Azure, Database management, Parallel processing, big data and Cloud security, Secure cloud architecture, Microsoft AI skills navigator, Agentic AI, AI4ALL, Claude Intro to agent skills, Data Structures & Algorithms, Operating Systems, Artificial Intelligence, Machine Learning, Computer Networks, System Design, Statistics.

TECHNICAL EXPERIENCE

AI4ALL Ignite Fellow May 2026–Present

● Designing an end-to-end supervised ML pipeline to predict atmospheric carbon monoxide concentrations from multivariate environmental sensor data.

● Performing EDA, feature engineering, visualization, preprocessing, and missing-value imputation using Python, Pandas, NumPy, and Matplotlib.

● Evaluating Linear Regression and Random Forest models using cross-validation and feature-importance analysis.

● Collaborating with a multidisciplinary team to build reproducible ML workflows while considering bias, interpretability, and responsible AI.

Insurance Claims Audit System (ERISA Discovery) Oct 2025- Nov 2025

● Built a dashboard for managing Insurance claims, supporting real-time collaboration (2000+ users) in claim auditing using Django, PostgreSQL, HTMX, Alpine.js, Bootstrap, and JavaScript.

● Optimized bulk CSV processing (<30s) with bulk create/bulk update, implemented role-based authentication, and deployed on Render with CI/CD and production security (HTTPS, CSRF, env vars).

PROJECTS

ClearVote (Carnegie Student Leadership Program) June 2026-Present

● Co-developed an AI-powered agent designed to detect and flag potentially misleading information that could influence voters' decisions. Built a verification pipeline that ingests information from trusted sources, compares it against claims surfaced by users on the web, and generates credibility assessments with links to verified sources; achieved 80%+ detection coverage in testing.

● Led the LangGraph orchestration layer, designing and connecting agent nodes, tool calls, and verification workflows to enable efficient, accurate, and context-aware reasoning. Integrated GPT-5.6 Luna LLM capabilities and external APIs to coordinate information retrieval, claim comparison, analysis, and response generation across the backend and React frontend.

Amazon Music Voice Agent (Amazon Nova Hackathon) March 2026-April 2026

● Built a voice-powered Amazon Music assistant Chrome extension allowing users to search songs, controls and manage playlists through natural speech, using a React + TypeScript Shadow DOM overlay with browser APIs and real-time backend communication.

● Developed a real-time audio streaming pipeline using the Web Media Recorder API, Kafka and WebSockets to transmit microphone audio to a Fast API backend, enabling low-latency voice interaction within the browser.

● Integrated Amazon Nova AI models, Nova Sonic for speech understanding, Nova Lite for reasoning and command interpretation, and Nova Act for UI workflow automation, to translate spoken requests into actions such as playing tracks and managing playlists.

LEADERSHIP & PROFESSIONAL DEVELOPMENT

Eaton EmpowerU 2026 Grambling, LA

Participant Jun 2026 – Present

● Selected for Eaton's emPOWERU Leadership Summit, strengthening leadership, collaboration, and engineering problem-solving through executive-led workshops.

Expedition EY – EY Global Learning Program

Participant /Virtual March 2026 – Present

● Selected to participate in EY's professional development program focused on business strategy, consulting problem-solving, and career readiness through workshops and mentorship with EY professionals.

Spectrum Sizzle Advanced Undergraduate Workshop June 2026

● Evaluated Qualcomm sidelink spectrum proposals and submitted engineering recommendations to the FCC while studying adaptive spectrum sharing and AI-enabled wireless systems.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML/CSS

Tech Stack: React, FastAPI, Flask, Django, Tailwind CSS, Kafka, Cassandra, DynamoDB, PostgreSQL, MySQL, Docker, Kubernetes, Redis, Amazon EC2, Azure

AI/ML: Scikit-learn, TensorFlow, PyTorch, Pandas, NumPy, Matplotlib, AI Agents, Amazon Nova, LangGraph, LangChain, Claude

Tools: Git, GitHub, Linux, REST APIs, Web Sockets, Agile, System Design
